

Label RF NT4242 !FaST™ Dry Inlay S

#5280478 | RF 8.2 MHz

Nedap RF labels belong to the best performing labels world-wide. They are the only RF EAS labels that are tested 100% meaning not only each label will work, it will as well have a minimum performance. This provides a very stable detection and deactivation performance. Nedap RF labels are compatible with all RF 8.2 MHz systems.

Label RF NT4242 !FaST™ Dry Inlay S

The unique, non reactivatable 42 x 42 mm / 1.65 x 1.65" RF label enables true invisible EAS source tagging of garments, shoes and other products. Unlike traditional EAS labels, after having been deactivated, !FaST™ will not reactivate due to the wearing or cleaning of garments or wearing of shoes. !FaST™ is the first solution that truly allows shoe retailers to embed fail-safe EAS technology into the sole of the shoe, allowing them to place both shoes safely on the showroom floor and providing consumers with a more comfortable shopping experience.

Benefits

- Color: transparent
- Not an adhesive label
- No reactivation during consumer use after deactivation at Point of Sale
- Enabling true invisible EAS source tagging of garments and shoes
- Excellent constant deactivation sensitivity
- Compatible with standard 8.2 MHz EAS detection- and deactivation systems

Technical Specifications

Resonance frequency	8.2 MHz +/- 5%
Size	42 x 42 mm
Q Factor	60
Effective Signal Volume	1.8 liter
QV	108
Quantity per roll	Custom
